

Spot In Residence * Traveling Tech Opportunities for Schools

Hello from Code & Circuit of Amesbury. *We have exciting news: we are expanding to offer school partnerships, including engagement with Spot, our Boston Dynamics robotic dog!* We recognize that expanding tech education is essential in order to prepare our youth for the future, so we find ways to incorporate SEL and brain-based learning into sessions.

Outreach to schools in Amesbury, Newburyport, Newbury, Malden, Dorchester, and Haverhill began in May of 2021 with overwhelmingly positive feedback. Interactive sessions include time with Spot, our robotic dog; coding; grade-level appropriate robotics; and brain-based learning activities. It is through these school visits and outreach that we aim to empower educators and local youth. We are moving forward with discounted pricing to local schools.

As a young nonprofit, we began very small. Our seeds are now planted to realize our vision and serve as a springboard for Computer Science education. We look to move beyond access...to provide inspiration and tap into the genius that each child possesses. Facilitating innovative technology sessions and related technology pedagogy to schools can enhance learning and transform student and educator experiences.

We hope to partner with you, and we are offering these rates for schools. Visits can include student workshops as well as educator trainings. Schools can personalize the visit to target the content and grade levels they wish to focus on.

Our initial offerings are as follows (inquire for Week in Residence discount):

- **\$100** Informal visit with Spot through the school at arrival or dismissal
- **\$500** Half Day Spot In Residence, with several personalized sessions
- **\$1,000** Full Day Spot in Residence with multiple tech, coding, robotics, and animation for Grades K-6
